

RPR® Sport

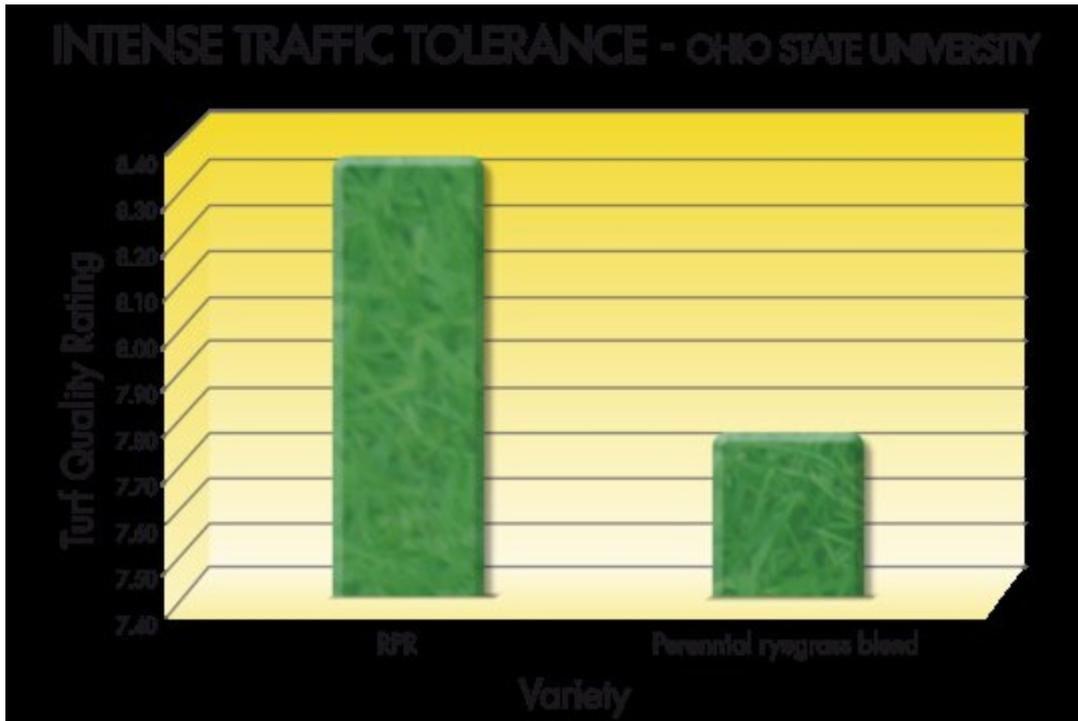

Regenerating and highest traffic possible

- ✓ Highest wear tolerance!
- ✓ Revolutionary: perennial ryegrass with stolons!
- ✓ Extremely strong and fast turf
- ✓ Less annual meadow grass
- ✓ Very high capacity for self-repair in spring

RPR, highest wear tolerance!

RPR spreads horizontally by creating a natural network of determinate stolons that form a kind of netting in the sward, making for excellent wear tolerance. Instead of individual grass plants, as in the case of traditional perennial ryegrass, each RPR grass plant is linked to other plants and to the soil. There is much less risk of the grass of sports fields being kicked up because it is tightly held in place. So the most intense matches can be played in sports fields without the risk of the dense sward being severely damaged.

Revolutionary: perennial ryegrass that spreads via stolons!

RPR is Regenerating Perennial Ryegrass that is as strong as iron, minimising the risk of damage caused in sports. This type of grass is unique in that its horizontally spreading determinate stolons create a sward that is many times stronger than that of other perennial ryegrass varieties. The outcome is a unique combination of advantages: a high wear tolerance and fast regeneration, minimising damage during games and ensuring a good condition of your sward.

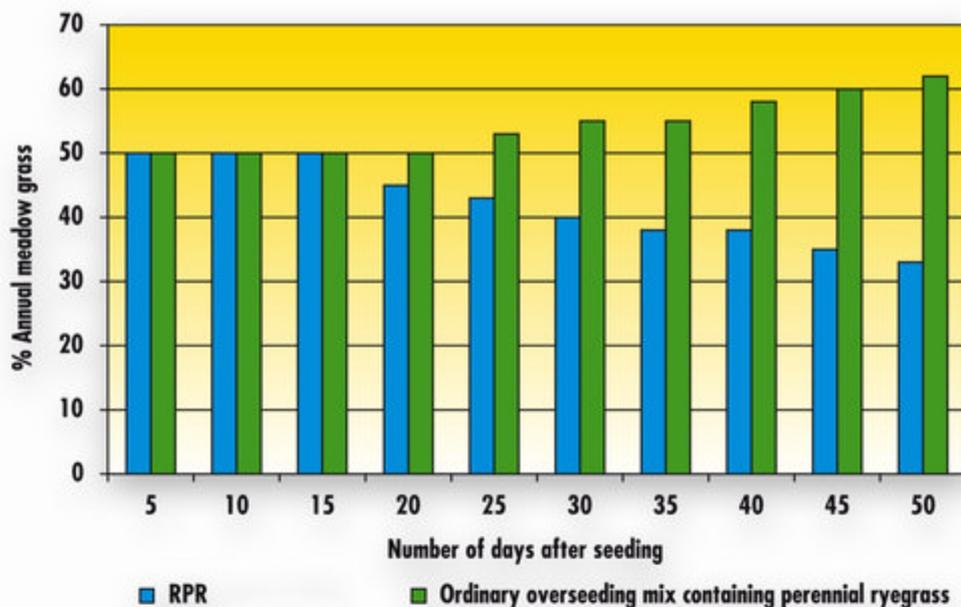

Less annual meadow grass

RPR is as strong as smooth-stalked meadow grass, but establishes much quicker, greatly reducing the risk of the establishment of undesired annual meadow grass. This implies the advantage of a denser, better rooting sward that needs less fertilisers and water.

Composition

Quantity	Species
50%	Lolium perenne - RPR® Technology
50%	Lolium perenne

Specifications

Name	Value
Establishment speed	very fast
Nitrogen requirement	high
Speed of Growth	fast
Sowing rate	2 - 2.5 kg/100m ²
Mowing height	from 20 mm
Packaging	15 kg

Characteristics

★★★★★ Fast Establishment	★★★★★ Self-Repairing
★★★★★ High wear tolerance	★★★★☆☆ High drought tolerance
★★★☆☆ Germination low temperatures 6°C	★★★★☆☆ Requires less irrigation
★★★☆☆ Requires less fertilisers	★★★★★ Requires less pesticide
